Scenario:

You are a college student planning to buy groceries from Costco for this week. You use the app to plan out your shopping and get an idea of when you should go to the store.

1. Plan a shopping trip for next week at 3 o'clock after your class. Pick your closest location and reserve that time.
2. Go and rate your visit to Costco on the 20th of October.
3. Find how long you have been a member at Costco and see if you have enough reward points in order to get some free items at your scheduled time

Needs Changes

- Need a way to see how much each membership rewards point is worth and what it can buy
- Need a return to home screen button after you schedule a shop
- Need a way to show expected wait times during the scheduling process. This is for the chosen date

Kept Details

- Keep the side bar for quick navigation
- Keep directions to your local store
- Keep current wait at your local store
